Why Attend

Heading: What would it take to build solutions that people actually adopt?

Body Copy: India's most critical challenges, climate, financial inclusion, preventive healthcare, haven't stalled for lack of funding or intent. They've stalled because a breakthrough idea only matters once it changes what people do. The Moonshot Philanthropy Summit starts from one

conviction: behavioural science, sharpened by AI and backed by bold philanthropy, is how ambitious ideas turn into habits that hold across a billion lives.

The summit looks at how behavioural evidence turns interventions into everyday habits, how AI helps that evidence travel across India's diversity of language and context, and how philanthropy can fund the experimentation this takes. It also asks the harder question: how do we measure and reward ideas whose real payoff is behaviour that lasts?

Three Pillars

Think Beyond Incremental Scale, radical invention, and the will to experiment. India's problems are layered; the solutions have to match them.

Design for Adoption Behavioural science and AI turn ambitious ideas into everyday actions, across India's languages, cultures and lived realities.

Invest in Transformation Funding models and impact frameworks built to reward behaviour change

Pull Quote This is the moment for India's philanthropic capital to stop funding programmes and start funding behaviour change.

Agenda

Heading: A call to think bigger, bet bolder.

Intro: Two hours, six movements, one throughline: why bold interventions matter, what behavioural science teaches us about change that lasts, how AI helps it travel, how philanthropy should fund and measure it, and what the next decade looks like if we get this right.

The Anatomy of Behaviour Change *Opening Keynote* Why India's hardest challenges have plateaued, and what opens up when behavioural science, moonshot thinking and AI meet. The foundation for everything that follows.

The Case for Investing in Innovation *Keynote* on why this is the moment for India's philanthropic capital to stop funding programmes and start funding behaviour change.

Behaviour Meets AI: The Amplifier Effect *Live Brainstorming Session* A builder, an implementer and a designer work it out live: what does AI actually need to personalise and

scale behavioural interventions across India's tangle of language, infrastructure, trust and culture? No rehearsed panel, a working session, in real time.

Measuring What Matters Panel Moonshots need a new funding structure, which means they need a new measure of success. A behavioural scientist, a CSR insider and a venture capitalist debate how behavioural outcomes can sit alongside outputs, and how a portfolio can satisfy the board while still backing the bold.

The Future we can create: Close keynote address

Speakers

Intro Scientists, technologists, founders, funders and storytellers, in one room for the first time, building a thesis for India's development sector in the age of AI.

The question on the table: **How do you fund moonshot ideas that change behaviour at scale?**

Speakers bring perspectives from across CSR, philanthropy, government, AI, and behavioural science, each shaped by a different vantage point on what it takes to move evidence into action, innovation into adoption, and ambition into transformation that lasts.

Card	Name	Title line	One-line summit role
1	Dr Pavan Mamidi [Speaker Name]	Director, Ashoka University's Centre for Social and Behaviour Change	The Anatomy of Behaviour change
2	Dr Sharon Barhnhardt	Director - Research, Ashoka University's Centre for Social and behavioral change	The science of behavioral change that lasts
3	Geetika Dadlani [Speaker Name]	Head, Giving Pi and associated Director, Dasra	What bold giving looks like from the inside

Card	Name	Title line	One-line summit role
4	Aayush Ailwawadi[Speaker Name]	Ai and Tech opinion leader	What it takes for AI to amplify impact
5	Devavrat Kakade [Speaker Name]	Executive Director, APAC, JP Morgan	Taking bold ideas to a billion people
6	Vanshika Goenka [Speaker Name]	CEO at Christy and Director at Welspun Group	How compliance and courage can go together
7	Ninad Karpe [Speaker Name]	Partner, 100xVC	The moonshot investment thesis
8	Nirav Khambhati	Partner, The Blended Finance Company	The case for funding innovation
9	Dr Maneesh Mishra	VP - Jindal Steel and Head Naveen Jindal Foundation	The ground reality of scale
10	Bilal Jalil	Director of WTF Media	How narrative can be an impact metric

About the Summit

The Moonshot Philanthropy Summit is convened by Ashoka University's Centre for Social and Behaviour Change to put a bigger question to Indian philanthropy: what would it take to fund the solutions our future actually needs? Over one curated evening in Mumbai, it brings funders, founders, scientists and policymakers into a single conversation about moonshot interventions,

behavioural science, AI, and the investment frameworks that turn ideas into transformation at population scale.

This isn't a conference to sit through. It's a working room, live case narratives, real-time brainstorming, and a shared ambition to move India's philanthropic capital from incremental giving to catalytic investment.

The Organisers

The Centre for Social and Behaviour Change at Ashoka University works at the frontier of behavioural science and its application to India's toughest development challenges. Its teams combine rigorous research, behavioural experimentation and emerging AI tools to build interventions that shift behaviour and improve outcomes at population scale, across health, nutrition, financial inclusion and beyond.

Request an Invite

Heading Request an Invite

Sub-heading Reserve your seat at the table

Copy The summit is invite-only and curated. Around the table: CSR heads of India's largest corporations, ultra-HNI philanthropists, family office leaders, foundation heads, and a small number of young policymakers, scientists and builders.

A room of decision-makers, builders and collaborators, united by the ability to turn ideas into action.
